

PREVENTATIVE HEALTH CARE FOR PETS (Dogs)

Puppy needs:

Vaccines/Deworm

6-8 weeks	9-11 weeks	12-14 weeks
D/H/P vaccine* Fecal and Deworm	D/H/P vaccine Deworm	D/H/P vaccine Fecal and Deworm Rabies**

*D/H/P = Distemper/Hepatitis/Parvo

**Rabies vaccine (Required by Alabama State law)

Deworming every 2-3 months for the first year

Additional **optional vaccines** depending on case: Leptospirosis, Kennel cough, Lyme disease ***
Vaccines NOT recommended: Corona virus, Giardia ***

Recommended:

1. **Heartworm preventative** – start when puppy is 16 weeks old and give 6-month Proheart6 injection biannually, or give oral medication each month for life
2. **Flea and tick prevention** – Beginning at 8 weeks of age - Frontline TopSpot applied at least every 2 months. After 8 weeks of age additional options include: monthly use of Comfortis (fleas) and Nexguard (fleas and ticks), after 6mo of age Bravecto (fleas and ticks) can be used every 3 months.
3. **Neutering** (spay or castrate) after 5-6 mo of age

Adult Dogs:

- 1.) Booster vaccine Distemper/Parvo/Hepatitis: First year and then annually thereafter.
- 2.) Booster additional optional vaccines if used***
- 3.) Rabies vaccine booster every 1-3 years depending on vaccine used (Required by Alabama State law)
- 4.) Fecal testing annually - Additional deworming varies based on test
- 5.) Heartworm test annually
